Finite Automata

DFA Part-2

DPP 05 Discussion

Mallesham Devasane Sir

01 Question

02 Discussion

Q.1

Design deterministic finite automata of set of all binary strings over $\Sigma = \{0,1\}$, where every binary string starting with 00100. How many minimum numbers of states required for above FA?

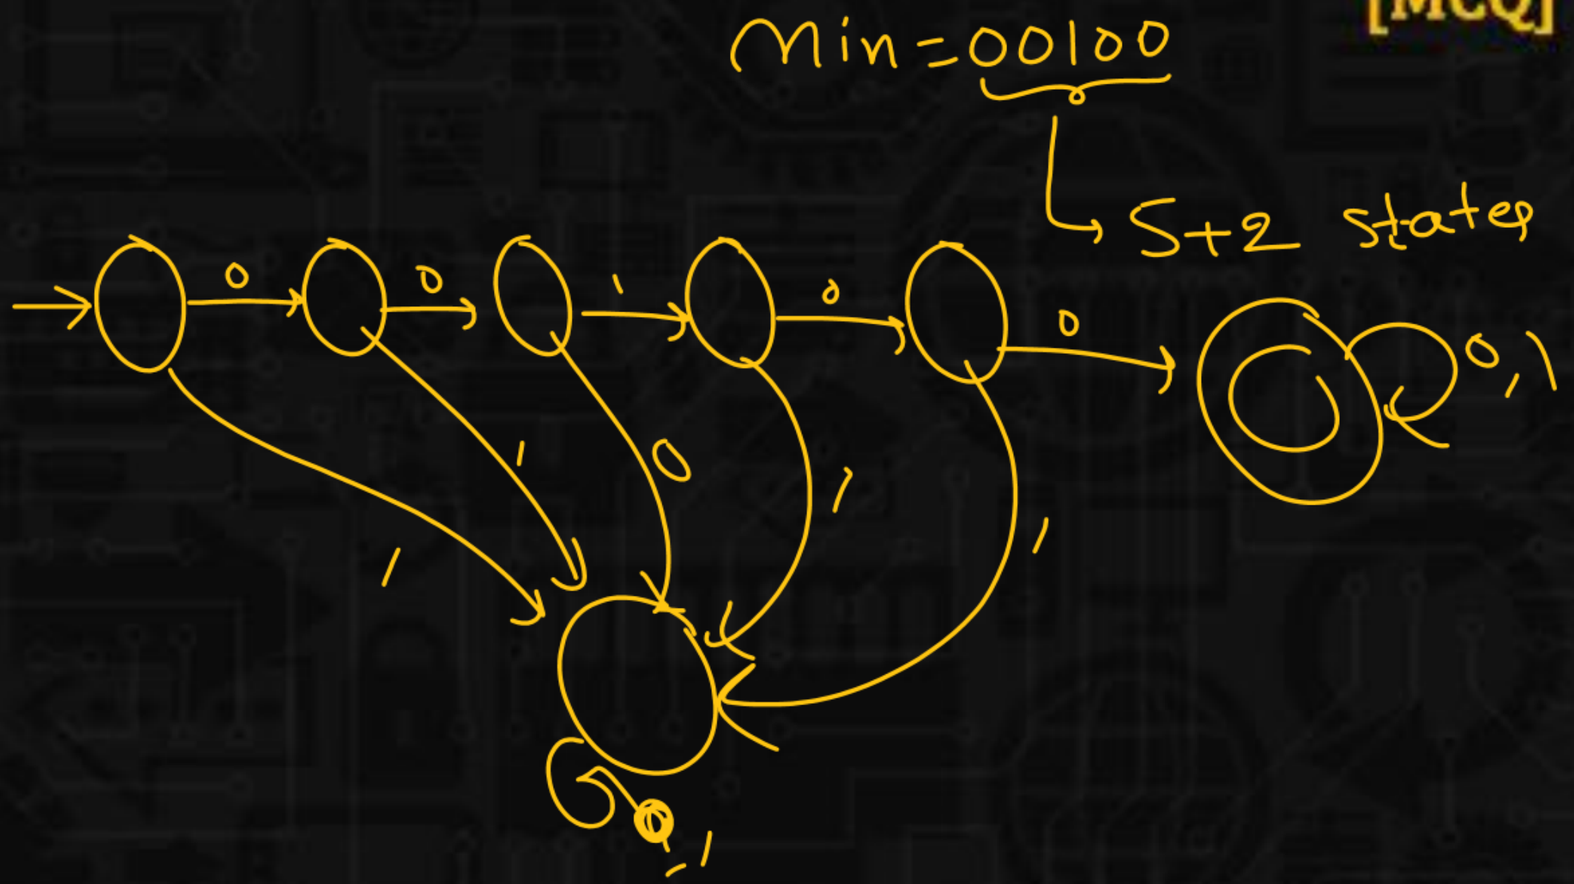
[MCQ]

A. 6

B. 5

C. 7

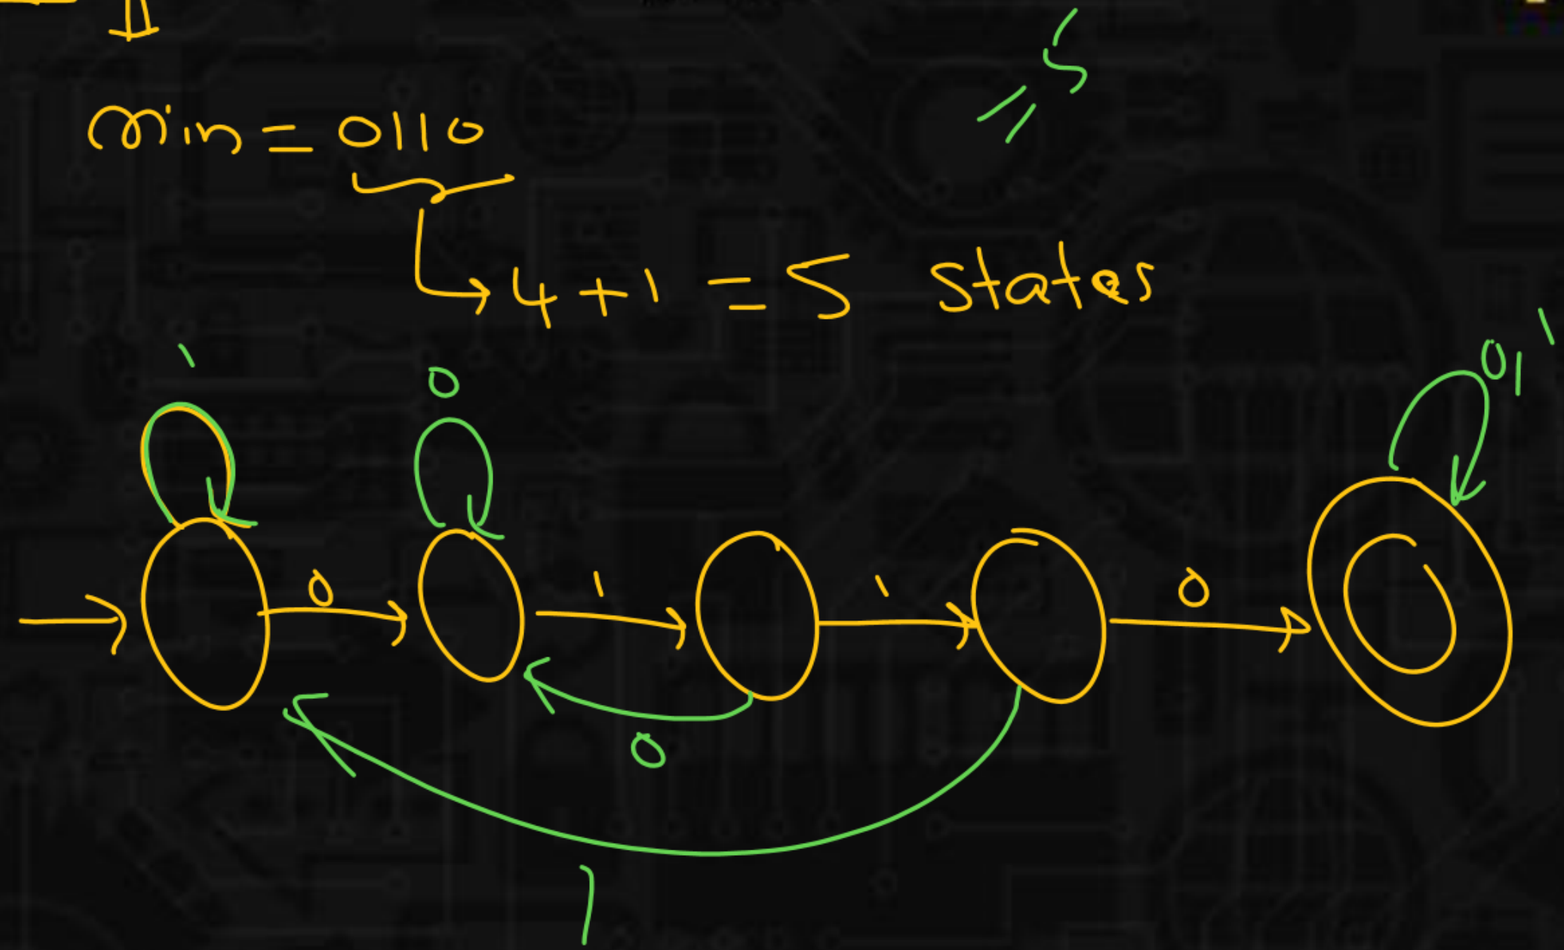
D. 4



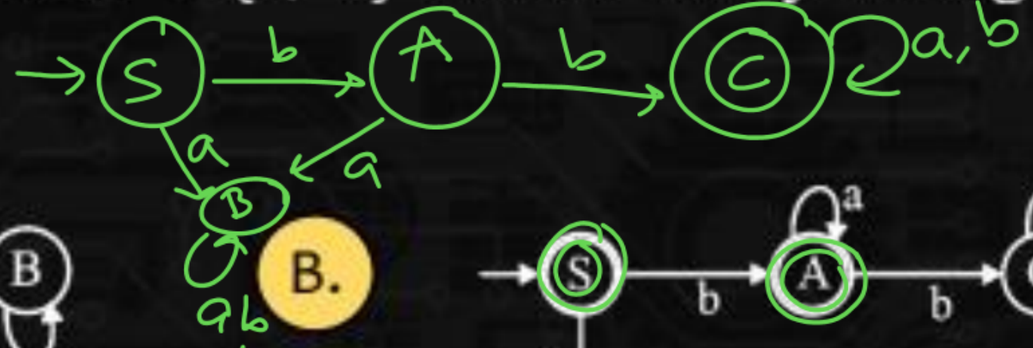
Q.2

How many states are required to design a minimal DFA for set of all binary strings over $\Sigma = \{0, 1\}$ where every binary string containing 0110 as a substring? ___ .

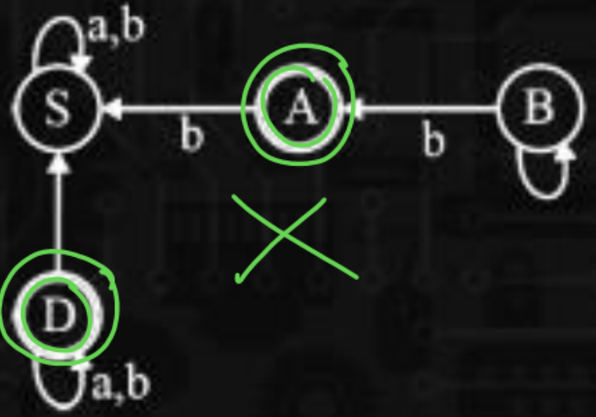
[NAT]



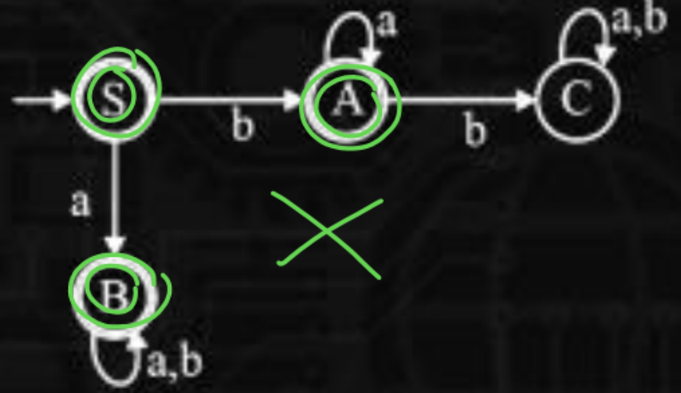
Q.3 Which of the following is correct design of a minimal DFA for set of all strings over $\Sigma = \{a, b\}$ where every string does not start with bb? [MCQ]



A.

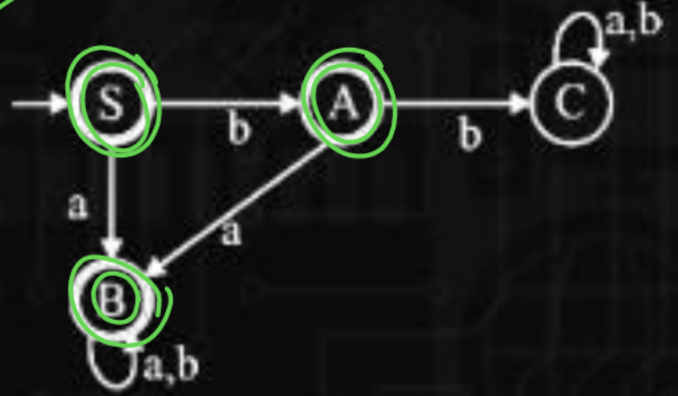


B.



C.

D.



Q.4

Which of the following statement is/are correct?

[MSQ]

A. DFA is possible for every regular language.

B. DFA is also possible for some non-regular languages.

C. DFA is possible for both finite language and regular infinite language.

D. There exist only 1 unique DFA for every regular language.

Q.5

How many states required to design a minimal DFA for L = {X ba | X ∈ {a, b} *}? _____

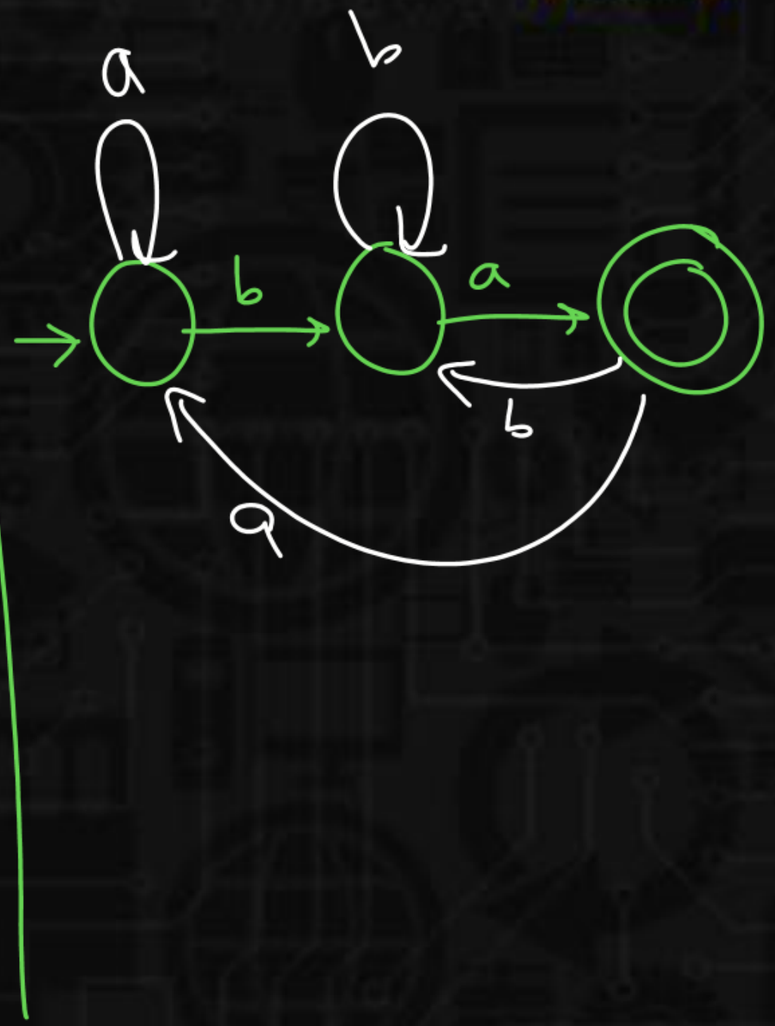
[NAT]

$(a+b)^* ba$

min = ba

→ 2+1

= 3 States



Q.6

Number of final states required to design a minimal DFA for L = $\{(\in + b + a)^2 \mid \Sigma = \{a, b\}\}$ is / are ____. [NAT]

$= 3$ //

$\in + a + b + aa + ab + ba + bb$
