Lecture No. 2

By- DEVA Sir

Introduction to TOC

TOPICS TO BE
COVERED

01 Regular Expression

02 Operators

03 Basic Regular Expressions

04 Simplification of Reg Exps

05 Writing Regular Exps

Language

→ Set of strings

$$\Sigma = \{a, b\}$$

Language over Σ :

$\{ \}$	$\{a, b\}$
$\{\epsilon\}$	$\{a, \epsilon\}$
$\{a\}$	
$\{b\}$	

$\{\epsilon, a, b\}$

Language \forall Alphabet
 ↳ set ↳ set

- Alphabet is language.
- language need not be Alphabet

$L = \{ \boxed{a}, b \}$
 symbol string
 one byte string

$\Sigma = \{a, b\}$

Symbol Vs String

aaa
 aab
 :
 :
 :

aa → not Symbol
 → String

ab

ba

bb

ε → String
 → not Symbol in Σ

a → Symbol
 → String

b → Symbol
 → String

Every Symbol is String.
 String need not be symbol

$$\Sigma = \{a, b\}$$

No. of symbols in $\Sigma \Rightarrow$ finite

$\epsilon, a, b, aa, ab, ba, bb, \dots$

No. of strings over $\Sigma \Rightarrow$ Infinite

$\{\}, \{\epsilon\}, \{a\}, \{b\}, \{aa\}, \dots$
.....

No. of languages over $\Sigma \Rightarrow$ Infinite

$$\Sigma = \{ \varepsilon, a \}$$

Symbol
one length string

$$|\varepsilon| = 1$$
$$|a| = 1$$

ε is not empty string

you have take some other notation

Assume λ is empty string

$$|\lambda| = 0$$

$\Sigma = \{ \epsilon, \lambda, a, b \}$

symbol
one length

empty string = ϵ

Alphabet

Strings

Languages

Operations on Strings

Unary
Binary

concatenation	$w_1 = ab, w_2 = aaa \}$ $w_1 \cdot w_2 = abaaa$ $w_2 \cdot w_1 = aaaab$
Reversal	$w = abc \Rightarrow w^{Rev} = cba$
prefix (abc.)	ϵ, a, ab, abc Beginning Sequence
suffix (abc.)	ϵ, c, bc, abc Ending Sequence
Substring (abc.)	$\epsilon, a, b, c, ab, bc, abc$ Part of string
Subsequence (abc.)	$\epsilon, a, b, c, ab, bc, ac, abc$ any subsequence
Length	$w = abc \Rightarrow w = 3$

(cb)

is not substring

ca

is not subsequence

$w = abcd$

2 choices
 $\uparrow \uparrow \uparrow \uparrow \Rightarrow 2^4 = 16$

$\epsilon \epsilon \epsilon \epsilon = \epsilon$
 $a \epsilon \epsilon \epsilon = a$
 $\epsilon b \epsilon \epsilon = b$
 $\epsilon \epsilon c \epsilon = c$

Prefix(w) = $\{u \mid u \circ v = w\}$

ϵ
 a
 ab
 abc
 $abcd$

5 prefix

Suffix(w) = $\{v \mid u \circ v = w\}$

ϵ
 d
 cd
 bcd
 $abcd$

5 suffix

Substring = $\{y \mid x \circ y \circ z = w\}$

ϵ
 a
 b
 c
 d
 ab
 bc
 cd
 abc
 bcd
 $abcd$

Subsequence

ϵ	abc
a	abd
b	acd
c	bcd
d	
ab	$abcd$
ac	
ad	
bc	
bd	
cd	

$$w = abcd$$

$$\begin{aligned} \text{Prefixes}(w) &= \{ u \mid uv = w \} \\ &= \{ \epsilon, a, ab, abc, abcd \} \end{aligned}$$

$$w = abcd$$

u	v	$= w$
-----	-----	-------

ϵ	$abcd$	$= abcd$
a	bcd	$= "$
ab	cd	$= "$
abc	d	$= "$
$abcd$	ϵ	$= "$

n Length string

→ No. of prefixes = $n+1$

→ No. of suffixes = $n+1$

*** → No. of Substrings = $\left(\min_{\substack{\uparrow \\ n+1}}, \max_{\substack{\uparrow \\ \sum n+1}} \right)$

→ No. of Subsequences = $\left(\min_{\substack{\uparrow \\ n+1}}, \max_{\substack{\uparrow \\ 2^n}} \right)$

when all symbols are same

when all symbols in string are distinct

$w = \underbrace{aaaa}_4$

Substrings
= 5

- ϵ
- a
- aa
- aaa
- $aaaa$

$w = \underbrace{abcd}_{4 \text{ length}}$

ϵ

a

b

c

d

ab

bc

cd

abc

bcd

$abcd$

$1+2+3+4$

$1+2+3+4+\dots+n$
 $\sum n = \frac{n(n+1)}{2}$

$\frac{n(n+1)}{2} + 1$

Operations on Strings

concatenation :

$$\left. \begin{array}{l} |w_1| = n_1 \\ |w_2| = n_2 \end{array} \right\} \Rightarrow |w_1 w_2| = \overset{2+3}{n_1 + n_2}$$

prefix

$$\left. \begin{array}{l} w_1 = ab \\ w_2 = acd \end{array} \right\} \Rightarrow w_1 w_2 = \underline{ab.acd}$$

suffix

substring

subsequence

length of string

Operations on Strings

Concatenation of 2 strings

$w_1 = abc$

$w_2 = ef$

$w_1 . w_2$

w_1 followed by w_2

$w_1 w_2 = abc.ef$

Operations on Sets

(Languages)

- Union of 2 sets
- Intersection of 2 sets
- Complement of a set
- Concatenation of 2 sets
- Reversal of a set

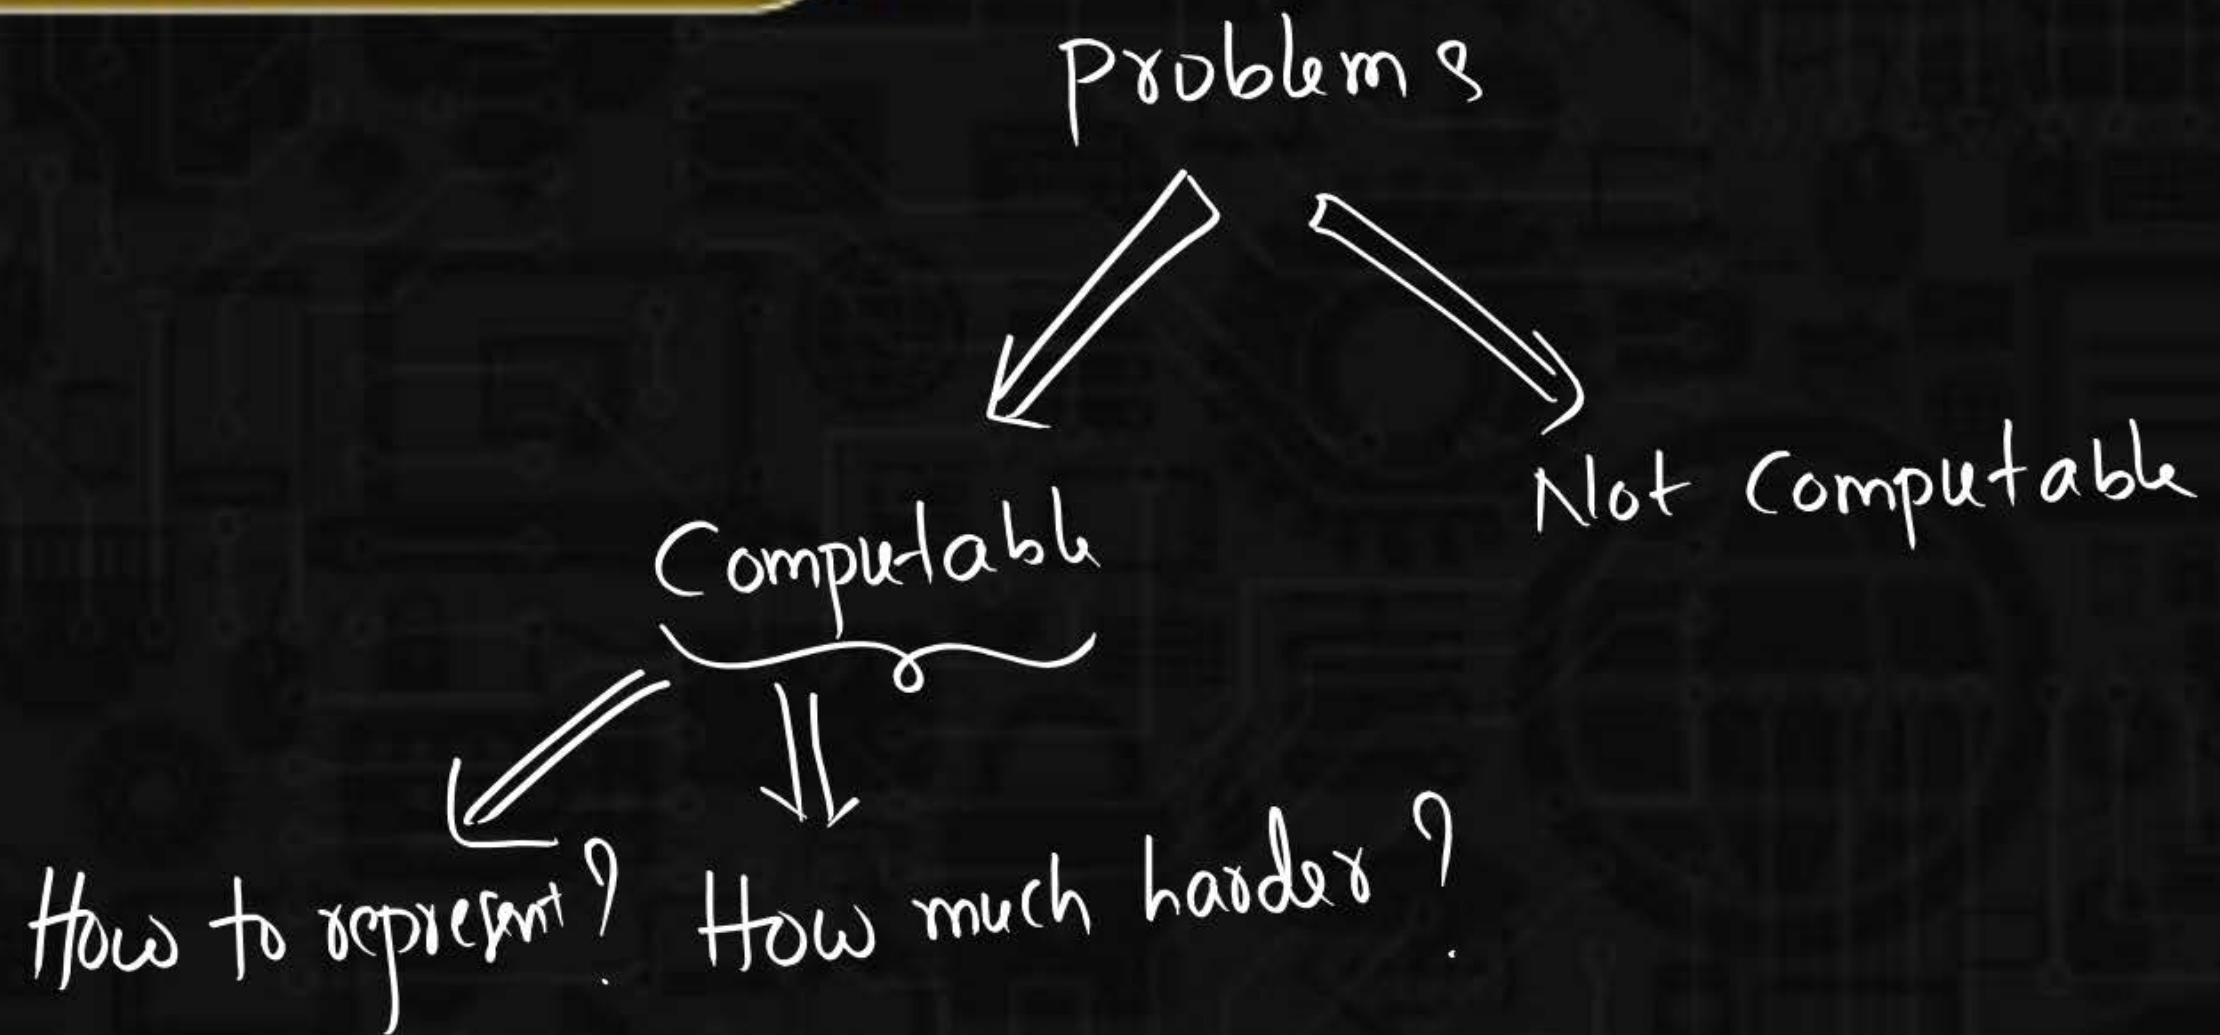

Operations on Sets

$$L_1 = \{ab, baa\} \quad L_2 = \{\varepsilon, a\}$$

$$\begin{aligned} L_1 \cup L_2 &= \{w \mid w \in L_1 \text{ or } w \in L_2\} \\ &= \{ab, baa, \varepsilon, a\} \end{aligned}$$

What is TOC?

Automata, Computability, and Complexity

What is Language?

collection of strings

What is Automata?

It is a machine that represents a language

What is Grammar?

It is Set of rules that generates a language

It represents
all problems which
are computable
without any
restriction

all RELs

It represents problems
which can be solved
with linear bounded tape

all CSLs

all CFLs

all
Regular sets

It represent
Problems which
can be solved
using 1 stack

It represents problems
which can be solved
using constant space
 $O(1)$

→ Every Regular language is CFL
is CSL
is REL

→ Every CFL is CSL
is REL

→ Every CSL is REL

CFL need not be regular
CSL need not be CFL
REL need not be CSL

Q.1

Let $L = \{\epsilon, a, ab, aba\}$. Then find length of Smallest string

Handwritten notes:
 $\epsilon \Rightarrow$ Smallest
 $\epsilon \Rightarrow$ min
 $aba \Rightarrow$ largest string

A.

0 ✓

B.

1

C.

2

D.

3

$$|\epsilon| = 0$$

Q.2

Find correct statement.

A.

$$\{a, ab\} \cdot \{\epsilon, b\} = \{a, ab, abb\}$$

Diagram illustrating the operation $\{a, ab\} \cdot \{\epsilon, b\}$. The first set $\{a, ab\}$ has elements a and ab enclosed in green boxes. The second set $\{\epsilon, b\}$ has elements ϵ and b enclosed in green boxes. Green arrows show the transitions: $a \cdot \epsilon = a$, $a \cdot b = ab$, $ab \cdot \epsilon = ab$, and $ab \cdot b = abb$. The result set $\{a, ab, abb\}$ has elements a , ab , and abb with checkmarks above them.

B.

$$\{a, ab\} \cdot \{\epsilon, b\} = \{a, \epsilon, b, ab\}$$

Diagram illustrating the operation $\{a, ab\} \cdot \{\epsilon, b\}$. The first set $\{a, ab\}$ has elements a and ab enclosed in green boxes. The second set $\{\epsilon, b\}$ has elements ϵ and b enclosed in green boxes. Green arrows show the transitions: $a \cdot \epsilon = a$, $a \cdot b = ab$, $ab \cdot \epsilon = ab$, and $ab \cdot b = abb$. The result set $\{a, \epsilon, b, ab\}$ has elements a , ϵ , b , and ab . The elements ϵ and b are crossed out with green X's.

C.

$$\{a, ab\} \cdot \{\epsilon, b\} = \{a, b, abb, ab\}$$

Diagram illustrating the operation $\{a, ab\} \cdot \{\epsilon, b\}$. The first set $\{a, ab\}$ has elements a and ab enclosed in green boxes. The second set $\{\epsilon, b\}$ has elements ϵ and b enclosed in green boxes. Green arrows show the transitions: $a \cdot \epsilon = a$, $a \cdot b = ab$, $ab \cdot \epsilon = ab$, and $ab \cdot b = abb$. The result set $\{a, b, abb, ab\}$ has elements a , b , abb , and ab . The element b is crossed out with a green X.

D.

None of these

Q.3

Let $L = \{aba, aabab\}$. Then $\text{prefix}(L) = ?$

$$= \{\text{pref}(aba), \text{pref}(aabab)\}$$

A.

$\{\epsilon, a, ab, aba, aa, aab, aaba, aabab\}$

B.

ϵ not present

$\{a, ab, aba, aa, aab, aaba, aabab\} \subset \text{prefix}(L)$

C.

$\{\epsilon, a, ba, aba, b, ab, bab, abab, aabab\}$

D.

None

40 marks

100 M

$\approx 70M$

1-50 Rank

Q.4

Let $\Sigma = \{\epsilon, a, b\}$. Then find correct statement

A.

$$|\epsilon| = |a| = |b| = 1$$

Annotations: Arrows point from 'length' to each term. An arrow points from 'symbol' to ϵ with the note 'not empty string'.

B.

$$|\epsilon| = 0$$

Annotation: An arrow points from 'symbol' to ϵ .

C.

$$\epsilon a = a$$

D.

$$\epsilon b = b$$

Annotation: An arrow points from ϵ to 'one length symbol'.

$$|\epsilon a| = 2$$

$$\epsilon a = a$$

Annotations: An arrow points from ϵ to 'not empty string'. An arrow points from a to 'symbol'.

Q.5

$$\Sigma = \{a, b\}$$

Then

~~A.~~

$$|\epsilon| = |a| = |b|$$

zero length (pointing to $|\epsilon|$)
1 length (pointing to $|a|$ and $|b|$)

$$(0 \Rightarrow 1 = 1)$$

B.

$$|\epsilon| = 0 \quad \checkmark$$

C.

$$\epsilon a = a \quad \checkmark$$

D.

$$\epsilon b = b \quad \checkmark$$

Q.6

Let $\Sigma = \{a, b\}$. Then

$\Sigma \cdot \Sigma = \Sigma^2 = ?$

$\Sigma \cdot \Sigma = \{a, b\} \cdot \{a, b\}$

$\Sigma^2 = \{aa, \underline{ab}, \underline{ba}, bb\}$
 $\Sigma^2 = \text{Set of all 2 length strings}$

A.

$\{aa, bb\}$

B.

$\{a, b\}$

C.

$\{\epsilon, a, b\}$

☒ D.

$\{aa, \underline{ab}, \underline{ba}, bb\}$

$\Sigma^0 = \{\epsilon\}$

$\Sigma^1 = \Sigma = \{a, b\}$

$\Sigma^2 = \text{set of all 2 length strings}$

$\Sigma^k = \text{Set of all k length strings}$

$$\Sigma = \{a, b\}$$

$$|\Sigma^K| = |\Sigma|^K \\ = 2^K$$

$$\Sigma^* \xrightarrow{\text{any}} = \Sigma^0 \cup \Sigma^1 \cup \Sigma^2 \cup \dots \\ = \text{Set of all strings}$$

Q.7

Regular language is

☒ A.

CFL

☒ B.

CSL

☒ C.

REL

☐ D.

None

Q.8

Set of regular languages

is same as _____

☒ A.

Type-3 class

☐ B.

Type-2 class

☐ C.

Type-1 class

☐ D.

Type-0 class

Q.9

Regular language is equivalent to

~~A.~~

Set of all regular languages =

$\{L_1, L_2, L_3, \dots\}$
Regular lang
set of regulars

B.

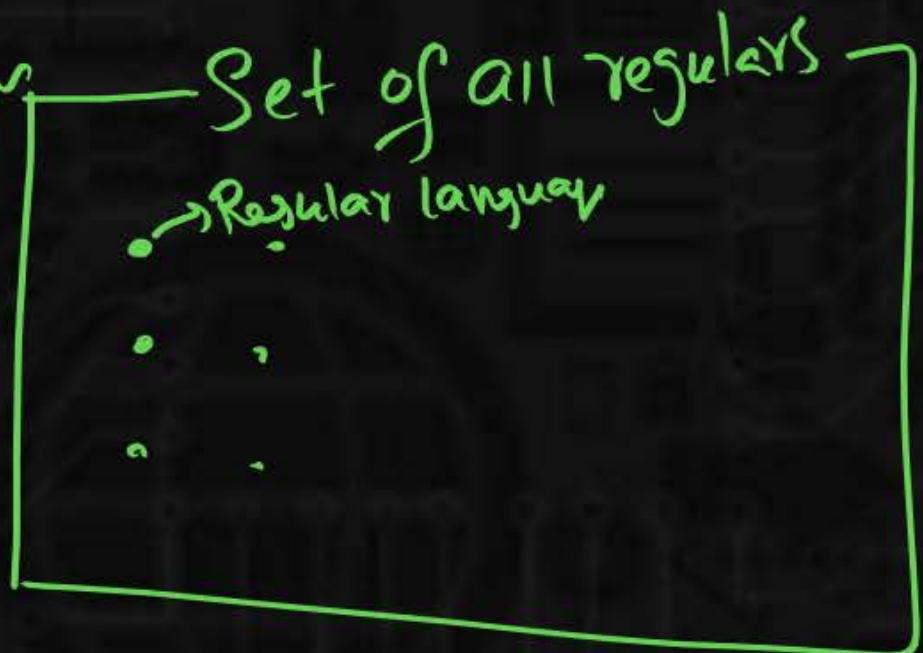

Belongs to Type-3 class

~~C.~~

CFL

~~D.~~

CSL

~~CFL is Regular~~

Regular is CFL

Regular \neq CFL

Regular language is belongs to _____

A.

Set of all regular languages = Type-3 class

~~B.~~

Regular language

Set of all CFLs

~~D.~~

Set of all CSLs
