I) Acceptance by Final state

After reading whole string
If $w \in L$, it halts at final state

II) Acceptance by Empty stack

After reading whole string
If $w \in L$, stack will be empty

Using Final State mechanism

At the end of input, only state
is matter

Where it halts

Stack is not required
(may be empty & not empty)

Is stack empty?

Try to make
empty stack

Push Down Automata

Using ^{only} Empty stack | (Assume initially z_0 is on stack)
(there is no meaning to final state)

①

$$L = \emptyset$$

②

$$A \xrightarrow{\epsilon, z_0 / \epsilon} A$$

$$L = \{\epsilon\}$$

③

$$L = \{a\}$$

complete the input
check stack

~~X~~ ϵ

Stack is not empty
